**State Board of Forestry and Fire Protection****Notice of Public Comment Period**

and

Findings Pursuant to Government Code Section 11346.1(b)**Emergency Rules to Minimize Natural Resource Damage and Spread of Sudden Oak Death****Notice Date: July 22, 2011**

The California State Board of Forestry and Fire Protection (Board) is requesting a readoption of an emergency regulation necessary to minimize natural resource damage and spread of Sudden Oak Death in the State's private timberlands, in accordance with existing statute PRC 4592, Emergency notice content and Government Code 11346.1 (h). The request for readoption is related OAL File No 2011-0127-01E which expires on August 9, 2011. The readoption is necessary because the Board is still in the process of researching environmental protection requirements for endangered species that will be incorporated into the permanent rule.

The readoption rule defines an Emergency Condition under 14 CCR §1052.1 and specifies the location, treatments, and environmental protection measures related to the removal of live and dead hardwood trees or vegetation infected by or susceptible to Sudden Oak Death disease. The rule allows filing an Emergency Notice instead of a Timber Harvest Plan when operations are conducted in accordance with the proposed rule conditions of §1052.5, Emergency Notice for Outbreaks of Sudden Oak Death Disease. This action is being taken in accordance with Government Code 11346.1 and 11349.6 of the Administrative Procedures Act.

Comments on this emergency regulation may be provided by mail, courier, email or fax. **Comments must be received by 5:00 PM, Tuesday August 2, 2011.** Comments should be addressed to both:

Board of Forestry and Fire Protection

Written comments can also be hand delivered to the contact person listed in this notice at the following address:

Board of Forestry and Fire Protection
Room 1506-14
1416 9th Street
Sacramento, CA

I. Finding of an Emergency

The Board finds there is an emergency situation present with action needed for immediate preservation of the public peace, health and safety, and the general welfare. The emergency situation is found in the following:

The request for emergency regulation is to address the Sudden Oak Death disease caused by the introduced and invasive plant pathogen, *Phytophthora ramorum*. The disease/pathogen is an absolute killer of tanoak and several other oak species. The disease has been known to be in the state since 2000, but has not been affecting commercial timber. It has been generally limited to the forestlands of the wildland urban interface (WUI) around communities and towns. The limitation to non commercial forestlands recently changed in 2010. In 2010, the pathogen was found in the Redwood Creek Watershed in northern Humboldt County potentially affecting the State's most productive and valuable redwood and Douglas-fir forests along with ecologically critical tanoak forests in the Redwood National and State Parks. The disease's impact on tanoak is also a significant threat to important cultural values of the Hoopa Valley Tribe who also hold land in the Redwood Creek Watershed. This recent change is the primary reason why the emergency rule must be taken and was not necessary to be taken through nonemergency regulations prior to 2010.

Immediate action is needed to establish a tree harvesting permitting system to allow foresters and landowners to have tools to be able to respond quickly to the disease. By establishing the emergency regulation, foresters will have a new category of Emergency Notice regulation under 14 CCR 1052 to permit commercial harvesting of trees for purposes of isolating outbreaks of the disease, such as the situation in Redwood Creek. By harvesting and treating infected portions of the trees, along with nearby susceptible trees and vegetation, it is possible to control the spread of the pathogen prior to its introduction to critical natural resources.

Background:

Phytophthora ramorum is established in some coastal California forests containing tanoak or live oak. Once established in a wildland environment, the pathogen expands its range by wind-driven rain, spreading its inoculum (largely sporangia) to nearby susceptible trees. Spread occurs mainly during warm spring rains. While localized spread is most common, sporangia have been shown to be blown up to 3 miles during large storm events.

The pathogen was first introduced to California forests sometime in the 1990s through the out-planting of infected nursery stock in three separate locations near San Francisco Bay (at Big Sur, Santa Cruz County and Mt. Tamalpais). By the time *P. ramorum* was identified as the causal pathogen of Sudden Oak Death in 2000,

it had already spread to several hundreds of acres in each of these locations. Although many native California plants were later discovered to host the pathogen with varying degrees of damage, outright mortality is most common in tanoak and several red oak species.

The disease has continued to expand since 2000 and now is established in a series of small outbreaks that stretch from Brookings, Oregon on the north to Monterey County on the south. While the disease had not been affecting commercial timberlands and has generally been limited to the forestlands of the wildland urban interface (WUI) around communities and towns, that situation has recently changed. The pathogen has been found in the Redwood Creek Watershed in northern Humboldt County, potentially affecting the State's most productive and valuable redwood and Douglas-fir forests along with ecologically critical tanoak forests in the Redwood National and State parks. This finding has demonstrated the need for more tools and resources to slow the spread and control the disease. While only 1% of the high risk habitat for the pathogen has been affected in Humboldt County, spot infections have been observed to serve as the mechanism for rapid explosions of the disease. For example, since 2004, the one known infection area in Humboldt County near Redway has grown at a rate of 1450 acres/year on average and now impacts over 10,000 acres.

These emergency rules are necessary for foresters and landowners to have tools to be able to respond quickly to the disease. If resources can be brought to bear on a new isolated spot, such as the situation in Redwood Creek, it is possible to control the pathogen. However, these actions require that we treat more than the symptomatic trees and need to include a buffer to address the individual trees that are not yet showing symptoms.

In the absence of this emergency rule, a forester can implement a control effort, but the effort cannot result in any commercial activity and is limited by a lengthy review process. This is a great hindrance as these control efforts require immediate action. Furthermore, they can be very expensive and without some return, few will be able to afford these needed efforts.

II. Other Findings

- The Board finds that legislative mandates are provided in Public Resources Code 4750 et seq including "to the extent feasible, stop the spread of sudden oak death and conserve oak trees and other plant species affected by the disease", support the Board's action.
- The Board declares an emergency condition is found relating to existing and potential natural resource damage, degradation of cultural values, and threat to ecological values due to the infection and spread of Sudden Oak Death in the state's private timberlands. This finding is accordance with existing statute PRC 4592, Emergency notice; content.
- The Board finds that regulatory amendments, within the scope of existing legislation and the Forest Practice Rules (Title 14 CCR, Chapters 4, 4.5 and 10), are necessary to provide regulatory relief for expedited and cost effective treatments of SOD infected trees and vegetation.
- The Board finds that allowing filing of an Emergency Notice instead of a Timber Harvest Plan when operations are conducted in accordance with the proposed rule conditions creates regulatory relief.

- The regulation is applicable to locations on private land subject to the Forest Practice Act (PRC 4511 et seq.) in the Coast Forest District of the Forest Practice Rules (14 CCR 907) and other coastal counties where there is a lab tested confirmation of the presence of SOD. The geographic areas where the regulation can be implemented are the 14 counties in California currently affected the SOD disease. Also, Del Norte and San Luis Obispo counties are applicable locations because these counties have high or very risk of future infestations.
- The Board finds that there are potential adverse environmental effects associated with the emergency regulation. Included in the regulation are requirements developed to mitigate any potential adverse environmental to level of less than significant. The primary potential adverse environmental impacts are related to potential widespread removal of infected or host hardwood tree species in watercourse and lake protection zones. Harvesting and removal of this material has the potential to create localized reduction of large woody debris that may in the future be used for in-stream ecosystem functions. Additionally, removal of host or infected hardwood trees in WLPZs and may reduce shade and microclimates which ameliorate the transfer of solar heat to fish bearing waters. The most prevalent situations for these types of potential adverse impacts would be in setting where SOD is widely spread near stream courses and the forest riparian vegetation is dominated by tanoak and or other hardwood tree species that are host for SOD and actively generate spores which can be transferred to other host species.

Other potential adverse environmental impacts, due to implementation of the regulation, are related to affects to the threatened northern spotted owl (*Strix occidentalis caurina*) (spotted owl), threatened marbled murrelet (*Brachyramphus marmoratus*) and their federally designated critical habitats. Impacts of actions similar to the proposed regulation, along with implications of impacts related to not implementing action to control the SOD, have been outlined in a Biological Opinion issued by the US Fish and Wildlife Service for SOD areas in southern Oregon in January of 2009. The Biological Opinion addresses potential impacts due to the implementation of Sudden Oak Death eradication activities that may affect listed species on public lands administered by the Rogue River–Siskiyou National Forest (Forest) and the Coos Bay District (District) Bureau of Land Management (FWS TAILS #: 13420-2009-F-0022).

The Board finds the regulation has incorporated mitigation measures that will eliminate or substantially lessen the identified potential significant adverse effects on the environment. Mitigation measures include:

- Compliance with all rules and regulations of the Forest Practice Act;
- Restriction from removal of conifer trees;
- Restrictions on operational methods and timing of operations used to harvest infected or susceptible trees (see 14 CCR 1052.5).
- Consultation with Cal Fire Pest Specialist prior to submission of the emergency notice to ensure harvesting is limited to necessary host an infected trees; site specific protection measures for the beneficial uses of water are developed; and appropriate sanitation measures are taken to avoid further spread of infected material as a result of the harvesting operations.
- Public trust agency project notification and opportunity for incorporating agency input into project design.

The Board finds the remaining unavoidable environmental impacts, if any, are acceptable in light of the environmental, economic, legal, social, and other considerations, because the benefits of the regulation outweigh the significant and adverse impacts. With implementation of these mitigations, effects will be substantially lessened or eliminated. However, all impacts may not be avoided,

particularly related to impacts on wildlife habitat, visual screening, or localized protection of beneficial uses of water. If any impacts remain they are likely minor, and more than overridden by the catastrophic effects resulting from expansion of the Sudden Oak Death disease, subsequent loss of forested conditions, diminution of forest ecosystem values, and increased threat of wildfire due to increased dead fuel loading that threatens life, property, human health, and natural resources.

- The Board finds the regulatory action related to this declaration shall be implemented as an emergency regulation in accordance with the GC 11346.1 of the California Rulemaking Law of the Administrative Procedure Act. Such emergency rulemaking is necessitated by the findings described in this declaration. In accordance with the code, such regulation would be in effect for 180 days. During this time frame, it is the intention of the Board to evaluate permanent regulations that address the emergency condition.
- The State Board of Forestry and Fire Protection as provided notice to the public in compliance with Public Resources Code section 11346.1 (a) (2), for the above titled action.
- Amendments to section 916.9 (t)(8)also correspond to sections 936.9 (t)(8) and 956.9 (t)(8).
-
- Public Resources Code section 4555 does not apply to the emergency action.
- Minutes of the Board action taken in June 2011 are included in the record.
- Documents which are incorporated by reference in the adopted regulation are included in the record. These include form RM -- 66 (1052.5)(2/1/11) for sudden oak death emergencies; and "Mitigation and Management Recommendations in the California Oak Mortality Task Force publication *Sudden Oak Death for Forestry, August 2010* at: www.suddenoakdeath.org/diagnosis-and-management/best-management-practices/

III. Authority and Reference

Public Resources Code (PRC) 4551 authorizes the Board to adopt rules and regulation as it determines are reasonably necessary to enable, implement, interpret or make specific PRC 4592. PRC 4750, 4750.3, 4750.4 authorizes the California Department of Forestry and Fire Protection to implement programs to detect, remove and treat SOD infected trees.

IV. Informative Digest/Policy Statement

The California State Board of Forestry and Fire Protection (Board) is promulgating an emergency regulation necessary to minimize natural resource damage and spread of Sudden Oak Death in the State's private timberlands, in accordance with existing statute PRC 4592, Emergency notice; content. The proposed rule defines an Emergency Condition under 14 CCR §1052.1 and specifies the location, treatments, and environmental protection measures related to the removal of live and dead hardwood trees or vegetation that are infected by or susceptible to Sudden Oak Death disease. The rule allows filing an Emergency Notice instead of a Timber Harvest Plan when operations are conducted in accordance with the proposed rule conditions of §1052.5, Emergency Notice for Outbreaks of Sudden Oak Death Disease. This action is being taken in accordance with Government Code 11346.1 and 11349.6 of the Administrative Procedures Act.

V. Specific purpose of each regulatory section

The specific purpose of the proposed rule is to 1) eradicate or control the spread of trees infected with or susceptible to Sudden Oak Death disease ; 2) allow filing of an Emergency Notice instead of a Timber Harvest Plan when operations are conducted in accordance with the proposed rule conditions of §1052.5, Emergency Notice for Outbreaks of Sudden Oak Death Disease; 3) establish the terms and conditions for the operations for the removal of infected or susceptible trees and vegetation; and 4) establishes a permit form that will facilitates disclosure and evaluation of the project.

Section § 895 is amended to add the abbreviation of Sudden Oak Death (SOD). This is needed to ensure clarity and brevity of the terminology.

Section § 916.9 (t) (8) specifically allows harvesting of SOD infected or symptomatic trees from WLPZs using an emergency notice that would otherwise be prohibited by this section.

Section §1052 (a) establishes the agency form that must be submitted by the timber harvesting applicant. A form is needed to ensure disclosure of the emergency conditions and provide other information regarding the intent for a sanitation plan to prevent the spread of the disease.

Section §1052.1(f) establishes the new emergency condition for SOD. An emergency condition must be defined and disclosed, in accordance to PRC 4592, prior to allowing operations to be permitted using an Emergency Notice. Subsections (1) – (4) limit the locations where SOD removals can occur to “isolated areas”. The intent of permitting removal on isolated infection areas is to focus eradication and control action on new outbreaks, away from inundated areas, for purposes of controlling the outer perimeter of the spread to new previously uninfected watersheds. Subsection (5) identifies the specific counties where the emergency can be applied. This subsection limits use of the Notice to the 14 coastal counties in California where known outbreaks of the disease are found or have high risk of new outbreaks.

Section §1052.2 (a) lists SOD outbreaks as a presumption for the declaration of an emergency. This amendment is needed so the narrative provided by the RPF can discuss SOD for substantiating the emergency and filing of emergency notice. It identifies that confirmed SOD infections are a basis for meeting the “likely to die” criteria in 14 CCR 1052, and thus allowing uninfected but susceptible trees to be harvested under the Emergency Notice.

Section §1052.2 (b) is a reorganization of existing emergency conditions situations related to insect mortality. Amendments to this section are not related to the SOD emergency conditions are reorganized solely for clarity.

Section §1052.5 establishes the terms and conditions that the Registered Professional forester (RPF) must follow to implement an operation under the SOD Emergency Notice. Section §1052.5 (a) (1) states that there must be a laboratory test that confirms the presence of SOD.

Subsection §1052.5 (a)(2) is a requirement for the RPF to seek to encompass the entire area of new infestation in the Emergency Notice area of operations. This is needed to ensure effective control of new SOD outbreak areas.

Subsection §1052.5 (a)(3) establishes a requirement for concurrence with CAL FIRE which trees or vegetation should be removed and how the operation will control or avoid further spread of the disease as part of the operation.

Subsection §1052.5 (a) (4) requires the RPF to evaluate and incorporate habitat requirements to ensure compliance with State and Federal Endangered Species Acts.

Subsection §1052.5 (a) (5) limits the harvesting of trees to those hardwood trees infected with SOD or host hardwood trees and other vegetation within 330 feet of the infected trees or vegetation. This is needed to eradicate infected trees and to remove uninfected host trees near infected trees that may be infected, but not yet symptomatic of SOD.

Subsection §1052.5 (a)(6) generally restricts the harvest of conifer trees, as these trees are not the primary hosts of SOD and do not extensively spread the disease.

Subsection (b) establishes the operational and permit filing disclosure requirements for an RPF filing an Emergency notice for SOD. Subsection §1052.5 (b)(1) requires the RPF to provide notification of the proposed operation to public trust agencies who may provide input for the project to address potential adverse environmental impacts associated with the operation.

Subsection §1052.5 (b)(2) allows the removal of infected and susceptible host hardwood trees or other vegetation within a watercourse. This is needed to effectively waive the prohibition in the FPRs on intensive harvesting in WLPZs and prohibition of “in-lieu or alternative” practices that are typically not allowed for Emergency Notice operations pursuant to 14 CCR 1052 (c).

Subsection §1052.5 (b)(3)-(7) and (b)(9)-(11) establish the minimum operational restrictions and reporting requirements necessary to avoid significant adverse impacts to the environment.

Subsection §1052.5 (b)(8) establishes reforestation requirements for conifer trees should they be removed below certain stocking standards.

Subsection §1052.5 (c) requires disclosure of a sanitation plan that describes how equipment used in the operation will be cleaned to minimize the risk of spread of SOD to uninfected areas.

VI. Disclosures Regarding the Proposed Action

The Board has determined the proposed action will have the following effects:

- Mandate on local agencies and school districts: None
- Costs or savings to any State agency: None
- Cost to any local agency or school district which must be reimbursed in accordance with the applicable Government Code (GC) sections commencing with GC §17500: None
- Other non-discretionary cost or savings imposed upon local agencies: None
- Cost or savings in federal funding to the State: None
- The Board has made an initial determination that there will be no statewide adverse economic impact directly affecting business, including the ability of California businesses to compete with businesses in other states.

- Cost impacts on representative private persons or businesses: The Board is not aware of any cost impacts that a representative private person or businesses would necessarily incur in reasonable compliance with the proposed action.
- Significant effect on housing costs: None
- Adoption of these regulations will not: (1) create or eliminate jobs within California; (2) create new businesses or eliminate existing businesses within California; or (3) affect the expansion of businesses currently doing business within California.
- Effect on small business: None. The Board has determined that the proposed amendments will not have an adverse affect on small business. The proposed regulation is designed to provide regulatory relief, leading to substantial reduction in regulatory filing and preparation fees.
- The proposed rules do not conflict with or duplicate Federal regulations.

15
16 **Amend 14 CCR § 1052.1. Emergency Conditions.**

17 The following are conditions that constitute an emergency pursuant to 14 CCR § 895.1: *****
18 ***** **(f) An isolated infestation of Sudden Oak Death (caused by *Phytophthora ramorum*), in the**
19 **locations listed below, where such treatments are intended to eradicate the infestation or significantly**
20 **slow the spread of the disease. For the purpose of this rule an isolated infestation is:**

- 21 **(1) an infestation located in a planning watershed where SOD had not previously been noted; or**
22 **(2) an infestation located in a planning watershed that is greater than 1 mile from a known SOD**
23 **infestation; or**
24 **(3) a new infestation within a planning watershed where all known previous SOD infestations**
25 **within the ownership have been or will be subject to control or eradication efforts; or**

1 (4) a location where landowners seek to contain an infestation, even though some landowners
2 have not made proactive efforts within a planning watershed, and the Department’s Pest Specialist
3 determines that control efforts may be effective.

4 (5) An isolated infestation is limited to locations in the Coast Forest District (14 CCR § 907),
5 and counties of Alameda, Contra Costa, Del Norte, Humboldt, Lake, Marin, Mendocino, Monterey,
6 Napa, San Mateo, San Luis Obispo, Santa Clara, Santa Cruz, Solano, and Sonoma.

7 The following are conditions that constitute a financial emergency as defined in 14 CCR § 895.1:
8 ***** at the completion of timber operations.

9
10 Note: Authority cited: Sections 4551, 4552, 4554.5, and 4555, Public Resources Code. Reference:
11 Section 4750, 4750.3, 4750.4 and 4592, Public Resources Code.

12
13
14 **Amend 14 CCR § 1052.2. Emergency Substantiated by RPF.**

15 The RPF preparing the Notice of Emergency Timber Operations shall describe the nature of the
16 emergency and the need for immediate cutting in sufficient detail so that the reason for the emergency is
17 clear. ~~Where tree killing insects have killed and are likely to kill trees within one year on timberland, an~~
18 ~~emergency is presumed to exist. Trees will be considered likely to die when they are determined, by an~~
19 ~~RPF, to be a high risk by either:~~ An emergency is presumed to exist where:

20 (a) Trees or vegetation have been confirmed to be infected with the pathogen that causes Sudden Oak
21 Death through testing by a lab certified by the United States Department of Agriculture, and the RPF has
22 determined that the pathogen is likely to spread to adjacent trees or vegetation, or

23 (b) Tree killing insects have killed and are likely to kill trees within one year on timberland. Trees will
24 be considered likely to die when they are determined, by an RPF, to be high risk by either:

1 **(1a)** Risk classification systems including Smith et al., 1981; The California pine risk-rating system:
2 its development, use, and relationship to other systems; In Hazard-Rating Systems in Forest Insect Pest
3 Management, Hedden et al., eds. USDA Forest Service General Technical Report WO - 27, pp. 53-69;

13
14
15 **Adopt 14 CCR § 1052.5. Emergency Notice for Outbreaks of Sudden Oak Death Disease.**

16 **(a) The RPF preparing the Emergency Notice shall do all of the following:**

17 **(1) provide as part of the Emergency Notice the certified lab testing results validating that trees**
18 **or vegetation in the infestation area are infected with SOD;**

19 **(2) seek to encompass the entire infestation area and landownership(s) necessary to undertake**
20 **effective control and eradication in the area covered by the Emergency Notice, however, the Emergency**
21 **Notice is not required to encompass these areas;**

22 **(3) evaluate and incorporate habitat requirements for fish, wildlife, and plant species to ensure**
23 **compliance with State and Federal Endangered Species Act using the California Natural Diversity**
24 **database maintained by the DFG, local knowledge of the planning watershed, and consultation with CAL**
25 **FIRE regarding other plans in the Emergency Notice area;**

1 (4) obtain written concurrence from the Department Forest Pest Specialist or Department
2 designee regarding tree and vegetation treatments or removal and strategies to control or suppress the
3 SOD infestation pursuant to 14 CCR § 1052.5 (c);

4 (5) designate for treatment or removal the host hardwood species in the infested areas and within
5 330 feet of the infestation area to control the spread of SOD consistent with Forest Pest Specialist
6 concurrence in (4) above;

7 (6) avoid designation of conifer trees for treatment or removal except as necessary to facilitate the
8 removal of host hardwood species, the salvage of conifer trees accidentally damaged during operations, or
9 as specified by the Department Forest Pest Specialist for purposes of controlling the spread of SOD.

10 (b) Timber operations conducted in accordance with 14 CCR § 1052.5 (a) above shall comply with all
11 rules and regulations of the Board. A person conducting timber operations under an Emergency Notice
12 for Outbreaks of Sudden Oak Death Disease shall comply with all operational provisions of the Forest
13 Practice Act applicable to “Timber Harvest Plan, “THP” and “plan” with the following exceptions or
14 additional requirements:

15 (1) The RPF shall provide written proof of notification regarding the proposed submission of an
16 Emergency Notice for SOD eradication to the NMFS, DFG, U.S. Fish and Wildlife Service (USFWS),
17 and the applicable regional water quality control board. Written notification shall be received by
18 NMFS,DFG, USFWS, and the applicable regional water quality control board at least 10 working days
19 prior to submission of the Emergency Notice.

20 (2) Tree and vegetation removal or treatment within WLPZ areas shall be permitted and limited to
21 symptomatic hardwood trees and shrubs that are infested with SOD or host hardwood trees that will
22 continue to contribute to the spread of SOD. Conifer trees shall not be removed in WLPZs.

23 (3) Timing of operations shall avoid impacts to federal or state listed species.

24 (4) No timber operations shall be conducted on saturated soil conditions.

1 (5) No tree felling operations from July 15 to September 30 that reduce overstory canopy cover in
2 WLPZs.

3 (6) No mechanical site preparation, broadcast burning, or pile burning in the WLPZ.

4 (7) 14 CCR § 916.3, 936.3, and 956.3, subsection (f) does not apply.

5 (8) Where present prior to the start of timber operations, post harvest stocking standards specified
6 in 14 CCR § 912.7, 932.7, and 952.7, subsection (b)(2) shall be met with group A species. Where
7 stocking of Group A species is not sufficient to meet the stocking standards of 14 CCR § 912.7, 932.7,
8 and 952.7, subsection (b)(2), post treatment stocking shall meet those stated in 14 CCR § 913.4, 933.4,
9 and 953.4, subsection (b), Rehabilitation of Understocked Area Prescription. The percentage of stocking
10 requirements met with Group A species on a point count basis shall be no less than the percentage of the
11 basal area they comprised before harvesting.

12 (9) Operations shall be conducted in accordance with conditions stated in 14 CCR § 1038
13 (b)(1),(2),(3),(4),(5),(7), (8), and (10).

14 (10) Tractors or other heavy equipment shall not be used within the WLPZ, except on existing
15 roads.

16 (11) The Department shall track the number of Emergency Notices for outbreaks of SOD, the
17 acreage treated under the notices, and the WLPZ acreage treated under the notices, and report the results
18 to the Board by December 1, 2011.

19 (c) The RPF shall describe the strategies employed which will be utilized to control or suppress the SOD
20 infestation on the harvest area along with those measures to be used to minimize the risk of spreading
21 *Phytophthora ramorum* from the logging area by way of infected soil and infected host material. In
22 developing such strategies, the RPF shall draw from the list of Mitigation and Management
23 Recommendations in the California Oak Mortality Task Force publication *Sudden Oak Death for*
24 *Forestry, August 2010* at: [www.suddenoakdeath.org/diagnosis-and-management/best-management-](http://www.suddenoakdeath.org/diagnosis-and-management/best-management-practices/)
